DETAILED ACTION

1. *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a machine readable identifier, classified in class 235, subclass 462.01.
- II. Claims 12-15, drawn to instructions for printing a figure on a sheet, classified in class 358, subclass 1.1.
- III. Claims 16-20, drawn to decoding a machine readable identifier of a template scanned into the digital transmitter, classified in class 235, subclass 462.07.
- IV. Claims 21-24, drawn to encoding information on the scan template into a machine readable identifier, classified in class 235, subclass 462.12.
- V. Claims 25 and 26, drawn to a digital transmitter (bar code reader), classified in class 235, subclass 462.11.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

case, the combination as claimed does not require the particulars of the subcombination as claimed.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
